DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-4 and 6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The "means for..." recitations in claims 1 and 6 have been considered to invoke means plus function per 35 U.S.C. 112, six paragraph. When looking to the specification, it is uncertain which elements constitute "means for determining a calculated flow rate," "means for continuously monitoring an actual flow rate," "means for comparing the desired flow rate with the actual flow rate and creating a feedback signal," and "means for providing the feedback signal."

Claim 1 recites the limitation "the desired flow rate" in line 8. There is insufficient antecedent basis for this limitation in the claim.

Claim 6 recites the limitation "the desired flow rate" in line 8. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 3752

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-6 (as best understood) are rejected under 35 U.S.C. 102(b) as being anticipated by Otten et al. (5,139,044).

Otten discloses a control system comprising: means for determining a calculated flow rate 39; means for continuously monitoring an actual flow rate 27; means for comparing 27; means for providing the feedback signal 29 (and/or perform other functions, column 4, lines 47-65, column 9, lines 52).
